

## POSTDOCTORAL POSITIONS

**One postdoctoral position** supported by a Consolidator grant is offered in Rosa M Rios's laboratory in the Cell Signalling Department of CABIMER in Seville (Spain), to study the mechanisms of protein secretion and compartment organization in animal

cells. We are interested in a key aspect of Golgi membranes organization in mammalian cells, their localization to the pericentriolar region. This location has a role in polarized secretion, cell migration and controlling entry of cells into mitosis. Successful candidates are expected to perform projects on the molecular and functional characterization of a number of protein complexes that we have recently identified in an extensive two-hybrid screen.

**Highly-motivated individuals with a strong interest in Cell Biology** are encouraged to apply. Prior expertise in molecular and cell biology is an asset. Positions are immediately available and are most suitable for individuals who have recently completed a PhD.

**Positions are limited to 2 years with the possibility to extend for additional two years according to productivity.** Positions will be paid according to established scales for CSIC postdoctoral researchers. Please send CV and a summary of research experiences as well as names and e-mail addresses of three scientists, including PhD advisor, to: Rosa M Rios [rosa.rios@cabimer.es](mailto:rosa.rios@cabimer.es) Centro Andaluz de Biología Molecular y Medicina Regenerativa Edif. CABIMER - Avda. Américo Vespucio s/n 41092 Sevilla

CABIMER ([www.cabimer.es](http://www.cabimer.es)) is a modern research Center in the South of Europe that is devoted to research on Molecular and Cellular Biology and Biomedicine. It is equipped with modern technology and benefits directly from a number of general internal facilities that include Cell culture, Advanced light Microscopy, Animal House, Transgenesis, Genomics, etc.
