POSTDOCTORAL POSITION

A postdoctoral position supported by a Consolider grant is offered in Rosa M Rios’s laboratory in the Cell Signalling Department of CABIMER in Seville (Spain), to study the mechanisms of cell polarity and compartment organization in animal cells. We are interested in key aspects of Golgi-centrosome organization in mammalian cells. This subcellular region has a critical role in polarized secretion, cell migration and controlling entry of cells into mitosis. The successful candidate is expected to perform projects on the molecular and functional characterization of a number of protein complexes previously identified in our lab.

Highly-motivated individuals with a strong interest in Cell Biology are encouraged to apply. Prior expertise in molecular and cell biology is an asset. Positions are immediately available and are most suitable for individuals who have recently completed a PhD. Positions are limited to 1 year with the possibility to extend for an additional one according to productivity. Positions will be paid according to established scales for CSIC postdoctoral researchers.

Please send CV and a summary of research experiences as well as names and e-mail addressed of three scientists, including PhD advisor, to: rosa.rios@cabimer.es

For more information:

CABIMER (www.cabimer.es) is a moder research Center in the South of Europe that is devoted to research on Molecular and Cellular Biology and Biomedicins. It is equipped with modern technology and benefits directly form a number of general internal facilities that include Cell culture, Advanced light Microscopy, Animal House, Trangenesis, Genomics, etc.
