

PostDoc Position Available

The **Chromatin modifications** laboratory (<https://www.cabimer.es/en/research-groups/chromatin-modifications/>) headed by **Dr. Gonzalo Millán Zambrano** at the Andalusian Center for Molecular biology and Regenerative Medicine (**CABIMER**) is looking for a post-doctoral researcher.

About us:

Our main interest is the characterization of the pathways leading to histone PTMs and their involvement in cancer. We use molecular and cell biology tools combined with genome-wide approaches to uncover the molecular mechanisms behind the role of novel histone PTMs in the regulation of chromatin function.

Mechanisms underlying the effects of histone PTMs

About you:

The candidate should hold a PhD in Molecular Biology, Bioinformatics or a related area. Practical experience in Molecular Biology, Genomics and/or Bioinformatics would be desirable but not an absolute requirement.

What we offer:

We offer a 2-year funded position to join an international laboratory with a friendly environment. Gross annual salary (24.500 € – 28.000 € depending on experience).

How to apply: Official call will be open in September. Send CV, Motivation letter and contact details for 2 references in advance to gonzalo.millan@cabimer.es.
